1 (0) Contest

1.1 C++ Template

```
/**
 * Sources: various
 */

#include <bits/stdc++.h>
#include <ext/pb_ds/tree_policy.hpp>
#include <ext/pb_ds/assoc_container.hpp>

using namespace std;
using namespace __gnu_pbds;

typedef long long ll;
typedef vector<int> vi;
typedef pair<int, int> pii;
template <class T> using Tree = tree<T, null_type,
    less<T>, rb_tree_tag,
    tree_order_statistics_node_update>;

#define FOR(i, a, b) for (int i=a; i<(b); i++)
#define FORi(i, a) for (int i=0; i<(a); i++)
#define FORd(i,a,b) for (int i = (b)-1; i >= a; i--)
#define FORd(i,a) for (int i = (a)-1; i >= 0; i--)

#define sz(x) (int)(x).size()
#define mp make_pair
#define pb push_back
#define f first
#define s second
#define lb lower_bound
#define ub upper_bound
#define all(x) x.begin(), x.end()

const int MOD = 1000000007;

int main() {
    ios_base::sync_with_stdio(0); cin.tie(0);
}

// read!read!read!read!read!read!read!
// ll vs. int!
```

1.2 FastScanner

```
/**
 * Source: Matt Fontaine
 */

class FastScanner {
    private InputStream stream;
    private byte[] buf = new byte[1024];
    private int curChar;
    private int numChars;

    public FastScanner(InputStream stream) {
```

```
        this.stream = stream;
    }

    int read() {
        if (numChars == -1)
            throw new InputMismatchException();
        if (curChar >= numChars) {
            curChar = 0;
            try {
                numChars = stream.read(buf);
            } catch (IOException e) {
                throw new InputMismatchException();
            }
            if (numChars <= 0) return -1;
        }
        return buf[curChar++];
    }

    boolean isSpaceChar(int c) {
        return c == ' ' || c == '\n' || c == '\r' || c == '\t' || c == -1;
    }

    boolean isEndline(int c) {
        return c == '\n' || c == '\r' || c == -1;
    }

    public int nextInt() {
        return Integer.parseInt(next());
    }

    public long nextLong() {
        return Long.parseLong(next());
    }

    public double nextDouble() {
        return Double.parseDouble(next());
    }

    public String next() {
        int c = read();
        while (isSpaceChar(c)) c = read();
        StringBuilder res = new StringBuilder();
        do {
            res.appendCodePoint(c);
            c = read();
        } while (!isSpaceChar(c));
        return res.toString();
    }

    public String nextLine() {
        int c = read();
        while (isEndline(c))
            c = read();
        StringBuilder res = new StringBuilder();
        do {
            res.appendCodePoint(c);
            c = read();
        } while (!isEndline(c));
        return res.toString();
    }
}
```

1.3 Troubleshoot

Source: KACTL

Pre-submit:

- Write a few simple test cases, if sample is not enough.
- Are time limits close? If so, generate max cases.
- Is the memory usage fine?
- Could anything overflow?
- Make sure to submit the right file.

Wrong answer:

- Print your solution! Print debug output, as well.
- Are you clearing all datastructures between test cases?
- Can your algorithm handle the whole range of input?
- Read the full problem statement again.
- Do you handle all corner cases correctly?
- Have you understood the problem correctly?
- Any uninitialized variables?
- Any overflows?
- Confusing N and M, i and j, etc.?
- Are you sure your algorithm works?
- What special cases have you not thought of?
- Are you sure the STL functions you use work as you think?
- Add some assertions, maybe resubmit.
- Create some testcases to run your algorithm on.
- Go through the algorithm for a simple case.
- Go through this list again.
- Explain your algorithm to a team mate.
- Ask the team mate to look at your code.
- Go for a small walk, e.g. to the toilet.
- Is your output format correct? (including whitespace)
- Rewrite your solution from the start or let a team mate do it.

Runtime error:

- Have you tested all corner cases locally?
- Any uninitialized variables?

- Are you reading or writing outside the range of any vector?
- Any assertions that might fail?
- Any possible division by 0? (mod 0 for example)
- Any possible infinite recursion?
- Invalidated pointers or iterators?
- Are you using too much memory?
- Debug with resubmits (e.g. remapped signals, see Various).

Time limit exceeded:

- Do you have any possible infinite loops?
- What is the complexity of your algorithm?
- Are you copying a lot of unnecessary data? (References)
- How big is the input and output? (consider scanf)
- Avoid vector, map. (use arrays/unordered map)
- What do your team mates think about your algorithm?

Memory limit exceeded:

- What is the max amount of memory your algorithm should need?
- Are you clearing all data structures between test cases?

2 (2) Data Structures

2.1 (2) Coordinate Compression

```
/**
 * Source: own
 */

void compress(vi& x) {
    map<int,int> m; for (int i: x) m[i] = 0;
    int co = 0; for (auto& a: m) a.s = co++;
    for (int& i: x) i = m[i];
}

// vi x = {2,4,3,6}; compress(x);
```

2.2 (2) STL Demo

```
/**
 * Source: StackOverflow
 */

struct cmp {
    bool operator()(const int& l, const int& r) const {
```

```

        return l > r;
    }
};

struct hsh {
    size_t operator()(const pii& k) const {
        return
            hash<int>()(k.f)^(hash<int>()(k.s^293849182));
    }
};

set<int,cmp> s;
map<int,int,cmp> m;
unordered_map<pii,int,hsh> u;

```

2.3 (3) 1D Range Queries

2.3.1 (3) BIT

```

/**
 * Source: own
 * Description: 1D point update, range query
 */

template<class T, int SZ> struct BIT {
    T bit[SZ+1];

    BIT() { memset(bit,0,sizeof bit); }

    void upd(int k, T val) { // add val to index k
        for( ;k <= SZ; k += (k&-k)) bit[k] += val;
    }

    T query(int k) {
        T temp = 0;
        for (;k > 0;k -= (k&-k)) temp += bit[k];
        return temp;
    }

    T query(int l, int r) { return
        query(r)-query(l-1); } // range query [l,r]
};

// BIT<int,1<<17> b;

```

2.3.2 (3) RMQ

```

/**
 * Source: own
 * Description: 1D range query
 */

template<class T, int SZ> struct RMQ {
    T stor[SZ][31-__builtin_clz(SZ)];

    T comb(T a, T b) {
        return min(a,b);
    }
}

```

```

void build(vector<T>& x) {
    FOR(i,sz(x)) stor[i][0] = x[i];
    FOR(j,1,31-__builtin_clz(SZ))
        FOR(i,SZ-(1<<(j-1)))
            stor[i][j] =
                comb(stor[i][j-1],stor[i+(1<<(j-1))][j-1]);
}

T query(int l, int r) {
    int x = 31-__builtin_clz(r-l+1);
    return comb(stor[l][x],stor[r-(1<<x)+1][x]);
}

// RMQ<int,100000> R;

```

2.3.3 (3) SegTree

```

/*
 * Source: http://codeforces.com/blog/entry/18051
 * Description: 1D point update, range query
 */

template<class T, int SZ> struct Seg {
    T seg[2*SZ], MN = 0;

    Seg() {
        memset(seg,0,sizeof seg);
    }

    T comb(T a, T b) { return a+b; } // easily change
        this to min or max

    void upd(int p, T value) { // set value at
        position p
        for (seg[p += SZ] = value; p > 1; p >>= 1)
            seg[p>>1] = comb(seg[p],seg[p^1]);
    }

    void build() {
        FORd(i,SZ) seg[i] = comb(seg[2*i],seg[2*i+1]);
    }

    T query(int l, int r) { // sum on interval [l, r]
        T res = MN; r++;
        for (l += SZ, r += SZ; l < r; l >>= 1, r >>=
            1) {
            if (l&1) res = comb(res,seg[l++]);
            if (r&1) res = comb(res,seg[--r]);
        }
        return res;
    }
};

// Seg<int,1<<17> b;

```

2.3.4 (4) BIT with Range Update

```

/**
 * Source: own
 * Description: 1D range update, range query
 */

template<int SZ> struct BITrange {
    ll bit[2][SZ+1]; // sums piecewise linear functions

    BITrange() { memset(bit,0,sizeof bit); }

    void u(int ind, int hi, ll val) {
        for(;hi <= SZ; hi += (hi&-hi)) bit[ind][hi] += val;
    }

    void upd(int hi, int val) {
        u(1,1,val), u(1,hi+1,-val);
        u(0,hi+1,hi*val);
    }

    void upd(int lo, int hi, ll val) { upd(lo-1,-val), upd(hi,val); }

    ll qsum(int x) {
        ll c1 = 0, c0 = 0;
        for (int x1 = x; x1 > 0; x1 -= (x1&-x1))
            c1 += bit[1][x1], c0 += bit[0][x1];
        return c1*x+c0;
    }

    ll qsum(int x, int y) { return qsum(y)-qsum(x-1); }
};

// BITrange<1<<17> b;

```

2.3.5 (4) Lazy SegTree

```

/**
 * Source: USACO Counting Haybales
 * 1D range update, range query
 */

const ll INF = 1e18;

template<class T, int SZ> struct LazySegTree {
    T sum[2*SZ], mn[2*SZ], lazy[2*SZ]; // set SZ to a
    power of 2
